THE SPOTLIGHT OF THE SYMPOSIUM

A wealth of indigenous knowledge on human physiology, its reciprocal relationship with nature is available in India. Such information was used to treat diseases. The defining principles of medicine prevalent then are not very obvious today. In this symposium, we bring together a panel of experts to synergize the concepts and find ways to integrate traditional knowledge with modern biology. This alone can pave way for a truly systems approach in understanding human biology, its pathophysiology and treatment of management of chronic diseases such as cancer.
